

TIRE INDUSTRY

RUBBER EXTRUDER

Our REEL winding system is one of our fully automated patented applications, developed for material winding. At DESMASA we design and manufacture our applications for tire manufacturing, thinking about innovation and improvement of the plant and production line. Our Tread robot manipulator or the cart winding system are two of the most installed applications.

Applications:

- **Reel winding system:** The purpose of the installation is winding material on reels, with a specific tension.
- **Tread robot manipulator in Booking System:** Storage of treads from conveyor to multi-tray trolleys
- **Cooling /Drying conveyor:** The implanted system allows the drying of wheels for internal transport.
- **Cart winding system:** The purpose of the installation is winding material on cart, with a specific tension.
- **Chafer application system.**
